

A Resource for Educators and Trainers

Workplace and Environmental Health and Safety Film Clips

<http://www.youtube.com/user/markdcatlin>

This channel contains more than 500 historic films clips on a wide range of workplace and environmental health and safety topics. These clips can be useful in teaching classes, including:

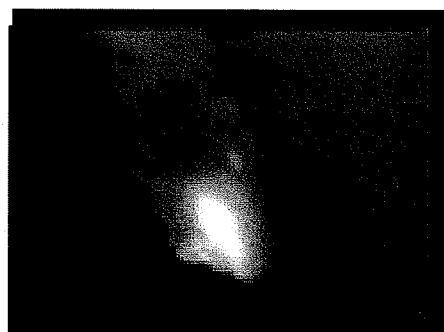

- HAZWOPER
- Asbestos
- Lead
- OSHA 10 and 30 classes
- Emergency response
- CBRNE
- Environmental and green classes
- Biological hazards
- EHS academic classes
- Labor history classes

These films clips are excellent triggers for discussions and will liven up training, especially refresher classes. During the past year, the channel had more than one million hits from around the world.

Most clips are taken from old government and industrial films from 1916 to 2000, and are in the public domain. The clips range in length from 20 seconds to 10 minutes. A keyword search tool is available on the channel homepage.

Respirator fit testing, 1930s

Disposal of Sodium 1948

Under the *more information* section on the webpage for each clip is information on original source, how the clip continues to be relevant and links to additional sources of information. You can also subscribe to the channel to get notice of newly posted clips.
